

Imagine...

Raw sewage pouring onto beaches and wetlands

Industrial outfalls creating wakes of foam in rivers and coastal waters

Ships discharging wastewater into scenic harbors

Citizens unable to make their voices heard by corporate polluters and indifferent governments

These scenes are no longer the norm, thanks to a law championed 35 years ago by a Maine Senator:

The Clean Water Act of 1972.

This one act, properly implemented, has the potential to protect or restore every water body in the United States.

Locally, there is one organization that works for a cleaner Casco Bay:

Friends of Casco Bay.

Friends of Casco Bay is a nonprofit, community-based organization dedicated to improving and protecting the environmental health of Casco Bay. We have worked for clean water by conducting water quality monitoring at more than 100 sites around Casco Bay for over 15 years, fighting a billion-dollar industry in order to reduce and regulate cruise ship pollution, pressuring municipalities to upgrade their sewage transport and treatment infrastructures, educating homeowners on how to grow green lawns without toxic pesticides and fertilizers, and removing over 100,000 gallons of vessel sewage with our own pumpout boat.

Critical to the success of Friends of Casco Bay is the Casco **BAYKEEPER**[®], a constant presence on the waters of Casco Bay and in meetings that determine the future use and protection of the Bay. Friends of Casco Bay is one of the seven founding members of the international coalition, **WATERKEEPER**[®]**ALLIANCE**.

In 2007, we celebrated 35 years of progress toward clean water.

“Can we afford clean water? Can we afford rivers and lakes and streams and oceans which continue to make life possible on this planet? Can we afford life itself?...These questions answer themselves.”

This impassioned speech by Maine Senator Edmund Muskie convinced his colleagues to override President Richard Nixon’s veto of the landmark legislation to protect the nation’s rivers, lakes, estuaries, and drinking water. On October 18th, 1972, Congress enacted the **Clean Water Act**.

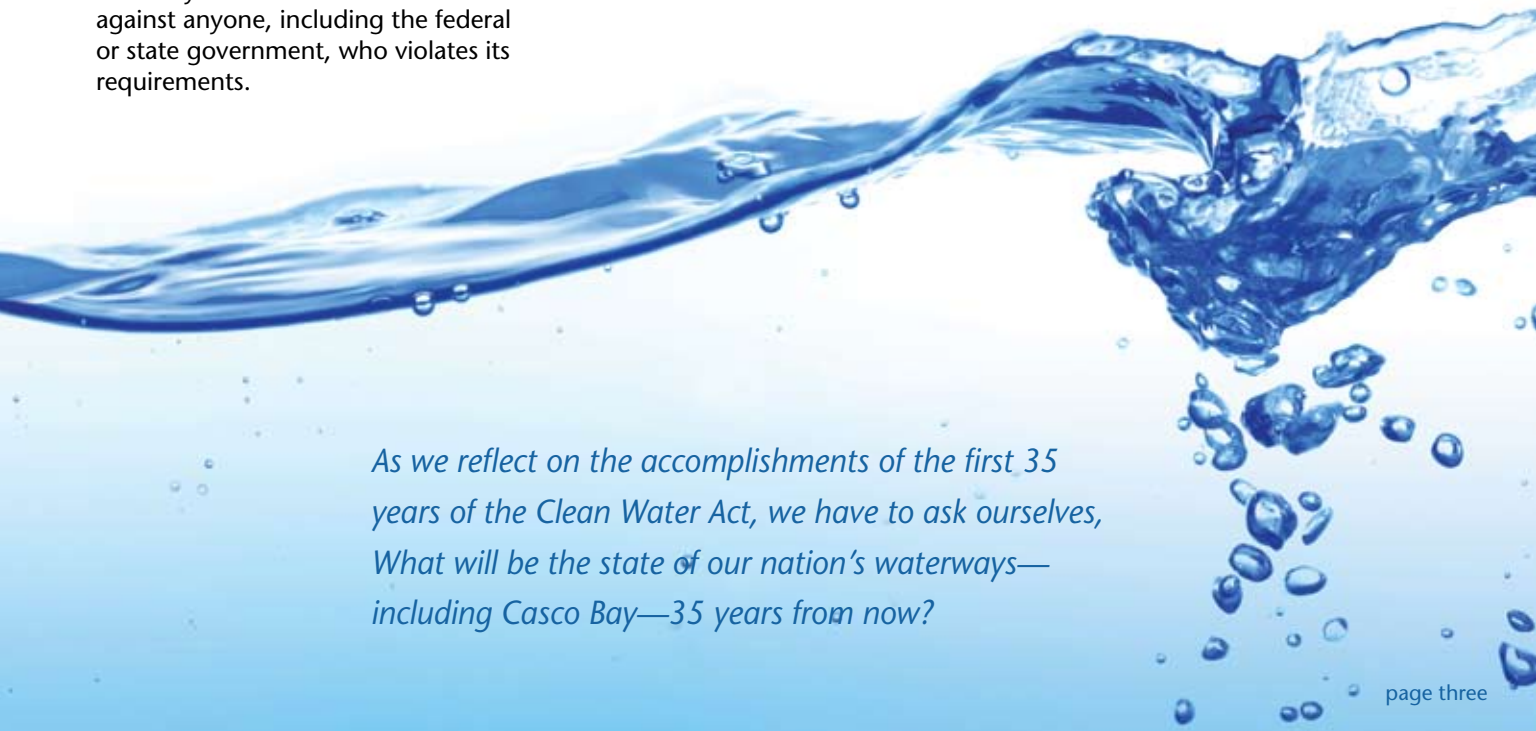

The goal of this historic law was to ensure **“fishable, swimmable, drinkable”** waters for all Americans by:

- Regulating discharges from factories, farms, and other pollution sources
- Building sewage treatment plants
- Requiring permits before wetlands may be dredged or filled
- Requiring states to create and then implement cleanup plans for their polluted waterways.

The Clean Water Act authorizes the U.S. Environmental Protection Agency (EPA), state agencies, and even private citizens to take legal action against those who violate the regulations of the Act. The Clean Water Act gives “any citizen” the authority to commence a civil action against anyone, including the federal or state government, who violates its requirements.

Friends of Casco Bay acts on behalf of these citizens, working to prevent millions of gallons of raw sewage, polluted runoff, and untreated industrial waste from ending up in Casco Bay. In our line of work, the Clean Water Act is the most important piece of legislation ever passed.

Yet, we still have a long way to go to fulfill the promise of the Clean Water Act. Today, over 45% of the rivers and lakes in the United States are still too polluted to be safe for their designated uses, such as fishing, swimming, and supplying drinking water. Many bays and bayous are considered “dead zones,” where polluted runoff has nearly depleted coastal waters of life-giving oxygen. The EPA has assessed 35% of the nation’s bays and estuaries; 32% of these are impaired, primarily by metals (especially mercury), nutrients, and low dissolved oxygen.

As we reflect on the accomplishments of the first 35 years of the Clean Water Act, we have to ask ourselves, What will be the state of our nation’s waterways—including Casco Bay—35 years from now?

Since 1989, Friends of Casco Bay has been working to improve and protect the environmental health of Casco Bay through advocacy, water quality monitoring, education and outreach, and collaborative problem solving.

Exemplary Management

On April 27th, Executive Director Cathy Ramsdell, CPA, and Development Director Will Everitt accepted the First Prize Dirigo Award for Nonprofit Excellence from Scott Schnapp, Executive Director of Maine Association of Nonprofits (left), for Friends of Casco Bay's exemplary business and management practices.

Advocacy

We helped win passage of a state law establishing a process to set limits on the amount of nitrogen pollution that can be discharged into Casco Bay. Friends of Casco Bay and Casco Baykeeper worked with Portland Representative Herbert Adams and the Maine Department of Environmental Protection to help draft the bill, and we provided much of the scientific data that ensured action on this issue. We continue to pressure municipalities to get rid of combined sewer overflows that send a toxic mix of contaminated rainwater and raw sewage into Casco Bay and to keep plowed, polluted snow from being dumped into the Bay. (left to right: Mike Doan, Joe Payne, Governor Baldacci, Cathy Ramsdell, Herb Adams)

Water Quality Monitoring

2007 marked our 15th year of monitoring water quality in Casco Bay. Friends of Casco Bay staff and volunteer Citizen Stewards collected water quality data at 53 sites around Casco Bay. While we added 35 new Citizen Stewards in 2007, we also recognized three volunteers who have been with the program since its inception. One of those veterans, Erno Bonebakker, said, "Being a Citizen Steward is an opportunity to care for an incomparable resource through stewardship. It gives one a sense of ownership and a connection far deeper than just observing the Bay, giving political support, or donating money."

Engaging the Community

Not only do we talk about the Bay, we take action to keep it clean. Our pumpout boat serviced 240 recreational boats in 2007, preventing nearly 5,000 gallons of raw sewage from being discharged into Casco Bay. More than 140 educators and families learned about Casco Bay through our Casco Bay curriculum, tidepool walks, and shoreline cleanups. Our BayScaping outreach educated more than 120 homeowners and horticulturists about how to grow healthy lawns without pesticides and fertilizers. We helped train 30 Master Gardeners to provide program support.

Education and Outreach

We celebrated the 35th anniversary of the Clean Water Act with nearly 200 friends of the Bay. *Fishable, Swimmable, Livable* featured Terry Tamminen (above), expert on global climate change and former environmental and policy advisor to California Governor Arnold Schwarzenegger. He linked the lessons learned from the Clean Water Act to strategies to cool the threat of global warming.

A Team Approach

Along with our volunteers and seasonal Pumpout Coordinators, Friends of Casco Bay was staffed by eight full-time people in 2007 and our first-ever paid intern.

(front row, left to right) Sarah Maciejewski, Cathy Ramsdell, Kristel Sheesley, Will Everitt, Peter Milholland, (back row) Mary Cerullo, Jeff Fetterer, Mike Doan, Joe Payne

2007 in brief

advocacy

Casco **BAYKEEPER**® Joe Payne works to ensure that environmental laws are enforced in our waters. One focus of his work in 2007 was ensuring environmentally safe dredging by working collaboratively at the local, state, and national levels.

Joe Payne sits on the Portland Harbor Dredge Committee, made up of waterfront businesspeople, municipal employees, and other marine and commercial interests. The group is pondering what to do with approximately 200,000 cubic yards of silt that has accumulated between Portland's wharves. Sediment testing around the Portland piers in 2004 determined that many of these areas are contaminated with dangerously high levels of pollutants. Pier owners are being squeezed between the need to dredge to make their wharves fully functional again and the potentially astronomical costs of removing contaminated soils. It's an onerous burden on current owners, since most of the contaminants generally came from past uses or from stormwater runoff from city streets and combined sewer overflows.

At Joe's suggestion, the Dredge Committee is looking at the pros and cons of a disposal method called CAD—Confined Aquatic Disposal—which essentially consists of digging a hole in the ocean floor in which to sequester the contaminated sediments. This method seems to have worked in Boston and in Rhode Island. Friends of Casco Bay will make sure that any disposal option is environmentally sound before it gets our support.

In addition to discussing dredging along the waterfront, Joe has also been working with the Army Corps of Engineers on plans to dredge the Portland Harbor ship channel.

Since 1989, Friends of Casco Bay has been working to improve and protect the environmental health of Casco Bay through **advocacy**, water quality monitoring, education and outreach, and collaborative problem solving.

What does the Clean Water Act say about DREDGING?

Dredging must not threaten marine habitat

According to Section 404, disposing of dredged materials at sea is only to be approved if "no action" or "disposal on land" are not reasonable alternatives. "The Secretary [of the Army, acting through the Army Corps of Engineers] may issue permits, after notice and opportunity for public hearings for the discharge of dredged or fill material into the navigable waters at specified disposal sites"...if it is determined that the discharge will not have "an unacceptable adverse effect on municipal water supplies, shellfish beds and fishery areas (including spawning and breeding areas), wildlife, or recreational areas."

Since 1989, Friends of Casco Bay has been working to improve and protect the environmental health of Casco Bay through advocacy, **water quality monitoring**, education and outreach, and collaborative problem solving.

Our advocacy is based on science. When we take a stand, polluters are hard pressed to argue with our position because it is based on credible data, much of it collected by our staff and Friends of Casco Bay-trained, EPA-certified volunteers. In addition to training 35 new volunteers and conducting quality assurance recertification sessions for 37 returning volunteers in 2007, Friends of Casco Bay provided training and technical assistance to students at Bowdoin College and Southern Maine Community College, as well as volunteers of Friends of Merrymeeting Bay.

In 2007, staff and volunteer Citizen Stewards sampled at 53 sites around Casco Bay. They collected baseline data on water temperature, salinity, pH, water clarity, and dissolved oxygen, as well as monitoring for nitrogen. Dissolved oxygen levels at several sites continue to pose a concern. The Stroudwater, Cousins, and Royal rivers all exhibited low oxygen concentrations at various

times during 2007. These same sites also showed high concentrations of dissolved inorganic nitrogen, another worrisome condition that has been seen in previous monitoring seasons.

Staff also sampled stormwater runoff during heavy rains in May and July 2007 in one coastal neighborhood in Cumberland. The toxic pesticide 2,4-D, used in Weed'N'Feed to kill dandelions, was found in water samples taken during the July rain storm. Extremely high levels of fecal bacteria were also found in the July samples. Nitrogen and phosphorus, components of fertilizers, were detected in water samples from both storms. When washed into coastal waters, these nutrients can cause algae blooms and degrade marine water quality. Since we began testing for lawn chemicals in stormwater in 2001, we have sampled at 19 different sites in 10 communities around Casco Bay.

water quality monitoring

What does the Clean Water Act say about DOCUMENTING WATER QUALITY?

Friends of Casco Bay's water quality data goes to Congress

Section 305(b) requires the U.S. Environmental Protection Agency to collect data from the states to compile a report to Congress on the nation's water quality that must include "a description of the water quality of all navigable waters in such State during the preceding year, with appropriate supplemental descriptions as shall be required to take into account seasonal, tidal, and other variations, correlated with the quality of water required by the objective of this chapter." Data from our Water Quality Monitoring

Program is included in the EPA's National Water Quality Inventory Report to Congress.

Our water quality monitoring has enabled the State of Maine to re-classify parts of Casco Bay to a higher water quality designation, which automatically sets a stricter limit on further pollutant discharges. This provision of the Clean Water Act enables communities to implement measured improvements in water quality.

Since 1989, Friends of Casco Bay has been working to improve and protect the environmental health of Casco Bay through advocacy, water quality monitoring, education and outreach, and collaborative problem solving.

What can you do to slow global warming?

- Reduce. Reuse. Recycle.
- Ensure your car is well tuned to run at peak efficiency to reduce air pollution.
- When purchasing a new car, opt for one with high gas mileage.
- Have your furnace, wood stove, and chimney checked and cleaned annually so they operate efficiently. This reduces airborne pollution that can end up in the ocean.
- Look for the Energy Star label when purchasing new appliances.
- Purchase renewable power from your electricity provider.
- Have an energy audit done of your home.
- Switch to compact fluorescent or LED light bulbs.

Everyone who attended our celebration of the 35th anniversary of the Clean Water Act found that learning, fun, and cake are hallmarks of any Friends of Casco Bay event. On Sunday, October 21st, 2007, Friends of Casco Bay hosted *Fishable, Swimmable, Livable: Making the Clean Water and Climate Change Connection*. We heard from guest speaker Terry Tamminen, former Santa Monica Baykeeper, Shakespearean scholar, and environmental advisor to California Governor Arnold Schwarzenegger. Terry described how we can apply the strategies of the Clean Water Act to confront the emerging issue of our time: climate change. In the absence of meaningful federal action to reduce greenhouse gases, he said, the nation must respond from the bottom up, with states, local governments, and citizens taking the lead in addressing global warming. A few weeks after coming to Maine, Terry was named one of the “50 people most likely to save the planet” by the British newspaper *The Guardian*.

The anniversary event also celebrated the contributions of our Citizen Stewards, other volunteers, service learning partners, student interns, and members. These partners become advocates and educators within their communities when neighbors see them testing at the water’s edge or picking up trash from local beaches and coastal areas.

education and outreach

What does the Clean Water Act say about CITIZEN INVOLVEMENT?

We are all guardians of clean water

Sections 101(a)(2), 303(d), 309(g)(4), 402(b)(3) and 404(h)(1) provide many opportunities for public comment, including before the EPA or the state issues permits to discharge water from an industrial site, a sewage treatment plant, or a stormwater outfall. Citizens may also comment before proposed changes to state water quality standards are approved. The public also can weigh in on a state’s proposed listing of “impaired water bodies.” A state must provide data that demonstrates that these water bodies do not meet water quality standards and then provide a plan for how they will be improved.

collaborative problem solving

Because of our credibility, we were heeded when we raised the alarm about a little-known, yet urgent problem in Casco Bay: the “rise of slime.” Friends of Casco Bay has amassed seven years of water quality data on nutrients that demonstrates that excessive amounts of nitrogen are entering Casco Bay. This data formed the basis of our advocacy to help convince the Maine Department of Environmental Protection that it needed to begin to work on the problem of nitrogen pollution. By working collaboratively with legislators, regulators, and regulated communities, we helped pass a bill to begin to develop nitrogen standards for marine waters. Through outreach and education, we continue to expose the seriousness of nitrogen pollution.

LD 1297 Resolve, Regarding Measures to Ensure the Continued Health and Commercial Viability of Maine’s Seacoast by Establishing Nutrient Criteria for Coastal Waters:

Whereas, nutrient pollution is a source of marine pollution, contributing to nuisance algal growth, harmful red tides, habitat impacts, and oxygen depletion in Maine’s coastal waters; and

Whereas, nutrient pollution is attributable to several forms of nitrogen entering Maine’s coastal waters from diverse sources, including industrial, municipal, residential, atmospheric and non-point sources, as well as offshore inputs from natural phenomena; and
Whereas, bays and estuaries in states south of Maine, including the rest of New England, already suffer significant water quality degradation from nutrient pollution...

This is the preamble to a bill drafted with input from Friends of Casco Bay, sponsored by Representative Herbert Adams of Portland, and passed by the Maine Legislature in 2007. The resulting law directs the Maine Department of Environmental Protection to reduce marine pollution in coastal waters by initiating discussions “with wastewater treatment facilities and interested organizations” (us) to draft a scope of work and timeline for developing nitrogen standards for Casco Bay, “given the data available for that region” (our data).

Since 1989, Friends of Casco Bay has been working to improve and protect the environmental health of Casco Bay through advocacy, water quality monitoring, education and outreach, and collaborative problem solving.

As every gardener knows, nitrogen is essential for the healthy growth of all living things. An overdose of nitrogen in the ocean, though, triggers an explosive growth of phytoplankton and green algae. Within hours, days, or weeks, the algae die, and then bacteria attack them, consuming dissolved oxygen and leaving less for ocean animals and plants. Nitrogen pollution comes from wastewater treatment plants, fertilizers from neighborhoods and farms, and

combined sewer overflows that divert raw sewage and stormwater runoff into the Bay when it rains. Nitrogen also falls from the air as nitrous oxides and acid rain from automobile exhaust, smokestacks, chimneys, and power plants. Excess nitrogen can result in slime-choked clamflats, extended red tides, fish kills, marine mammal deaths, and outbreaks of shellfish poisonings.

What’s the problem with nitrogen?

From the Executive Director

I grew up on Penobscot Bay back before the Clean Water Act. In those days, opportunities for employment were plentiful as there were factories and farms all over Waldo County. But the downside of that, unfortunately, was lots of pollution. The processing of shrimp, sardines, and especially chickens meant that fluid wastes went straight into the Bay, along with our raw sewage. Chicken blood meant tides that were literally red year round, and the chicken fat was so thick, the Camden schooner fleet was loath to come into Belfast harbor during those infamous Pen Bay fogs because the fat would grease their hulls and inevitably go rancid on subsequent hot days. Not good for tourism, let alone the marine ecology of the coast of Maine. It was much the same here in Casco Bay.

Here we are, decades after the passage of the Clean Water Act, and what a difference. While there is still much to be done, there are dramatically fewer straight pipes dumping toxic mixtures into our rivers and coastal waterways.

Casco Bay, as well as Pen Bay, are dramatically more fishable, swimmable, and livable. The economic vitality of tourism in this state now is largely concentrated on the coast.

These days, threats to our water quality tend to be of the nonpoint source variety – stormwater runoff, snowmelt, air deposition of pollutants, and combined sewer overflows. Here at Friends of Casco Bay, we endeavor every day to investigate these threats to the water quality of the Bay, leverage good science to collaborate with disparate groups to advocate for what is best for the Bay, and educate ourselves and our community about what each of us can do differently to reduce the potentially environmentally harmful effects of our lifestyles.

Casco Bay belongs to all of us. We'll keep keeping an eye on the Bay. We hope you will, too.

A handwritten signature in black ink that reads "Cathy L. Ramsdell".

Cathy L. Ramsdell, CPA, Executive Director

What does the Clean Water Act say about “AN ESTUARY OF NATIONAL SIGNIFICANCE”?

Casco Bay is officially recognized as a special place

To those of us who cherish Casco Bay, it is not surprising that it is the only water body in Maine to be designated “an estuary of national significance” under Section 320 of the Clean Water Act. Casco Bay is one of 28 estuaries in the nation with special protection under the EPA “to collect, characterize, and assess data on toxics, nutrients, and natural resources within the estuarine zone to identify the cause of environmental problems...and... assess trends in water quality, natural resources, and uses of the estuary.”

plans for 2008

Looking ahead to some of our top priorities for protecting Casco Bay in the coming year, we anticipate we will:

- Meet with sewage treatment operators and municipal officials, in conjunction with the Maine Department of Environmental Protection, to discuss strategies and technologies to limit nitrogen pollution and to assist the State in the process of setting limits for nitrogen inputs to Casco Bay
- Work with municipalities, state agencies, marine businesses, and others on oil spill preparedness, dredging, combined sewer overflows, coal tar remediation, snow dumping proposals, waterfront development projects, and other emerging issues
- Conduct monthly, surface-to-bottom water quality sampling at 10 offshore stations by boat
- Monitor water quality at 40 shoreside sites by volunteer Citizen Stewards for the 16th year
- Document the levels of nitrogen in Casco Bay through intensive monitoring at more than 50 stations
- Expand nitrogen sampling, as needed, to collect more data to inform the Maine Department of Environmental Protection's plan for setting criteria for Casco Bay
- Work with the Town of Cumberland and the Maine Board of Pesticides Control to sample stormwater for pesticides, fertilizers, and bacteria
- Educate homeowners about strategies to reduce their use of fertilizers and toxic pesticides
- Help establish criteria to identify lawn care professionals who can provide ecological landscaping services
- Organize shoreline cleanups and other community efforts to improve and protect the Bay
- Increase our use of Geographic Information Systems (GIS) to enhance the presentation of our water quality data
- Collaborate with teachers to incorporate our place-based Casco Bay Curriculum into their classrooms
- Expand our Speakers Program, accepting engagement requests where we can talk about specific initiatives tailored to the interests and concerns of each community
- Continue to play an essential role in reducing vessel sewage discharges into the Bay through the Vessel Pumpout Program, educating boaters, and acting as a liaison between the Maine Department of Environmental Protection and those marinas in out-of-service mode.

Nationally, about two-thirds of all water pollution comes from stormwater runoff. Nitrogen pollution falls within this parameter. Section 402(p) requires permits for municipal, industrial, and construction discharges; its enforcement will result in a meaningful reduction in stormwater pollution.

What does the Clean Water Act say about POLLUTED RUNOFF?

Stormwater runoff is the Number One pollutant of our nation's water bodies

We Are Protecting the Bay Thanks to You...

Friends of Casco Bay appreciates the many members and supporters who are partners in our work to protect Casco Bay. The following list includes those who made gifts to Friends of Casco Bay between January 1 and December 31, 2007. If we have missed your name, please accept our apologies and call Will Everitt at (207) 799-8574 to correct our error.

What people say about Friends of Casco Bay / Casco BAYKEEPER®

"They are out on the Bay collecting data to support their arguments."

Member

Pragmatic

"When they see a problem, they don't just point it out; they work to resolve it."

Municipal Partner

People-centered

"They are people who care, defending the public's right to a healthy Bay by working with partners with different perspectives."

Citizen Steward
